Prof. S.R.S Iyengar
Department of Computer Science
IIT Ropar

You're probably seeing a pattern in the video clips right. So we start with a relation, a type of relation and then we end up asking the same old question of what are the total possible relations of this type right. We basically ask this counting question which I told you is very important right. So we will continue to have this pattern. We will see more different types of relations and then ask the same question of what are the total possible ways in which you can find such a relation.
