Functions

Commonality in examples

Prof. S. R. S. Iyengar
Department of Computer Science
IIT Ropar

What you see in common in both the examples. The first example was about your parking fee per hour. The parking fee was dependent on the duration.

IIT Ropar

What was common ?

1. Parking fee \rightarrow Duration
2. Temperature \rightarrow Place

NPTEL

In the second example the temperature was dependent on the place. As you can see the right side depends on what is on the left side.
