## Financial Accounting Dr. Puran Singh School of Humanities and Social Sciences Indian Institute of Technology, Mandi

## Lecture – 81 6.11 Online Resources for Financial Analysis

Hi. In this video we are going to discuss the online sources where you can find financial data for a company. Looking through the annual report can be tedious sometimes and if you have to compare companies in a sector, in an industry, then looking at the reports and bringing the data in one place may be difficult. Also, you will need to calculate certain ratios, certain indicators which may not be present in the financial statements of a company. Are there some online resources which we can refer to and what kind of numbers do they report? Do they report the same indicators that we have learnt in this course? Let us understand the resources and look through some of those resources.

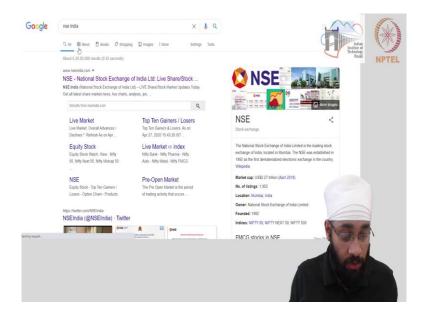

(Refer Slide Time: 01:01)

In this video I am going to take you through some of these websites which you can use to access financial data, the statistics, the indicators, financial indicators, for any listed, public listed company, which means the company has to be listed on the stock exchange. It has to be a public company only, then these numbers are available more freely in the market. If it is a private company then you may be able to find some numbers, but not all the numbers. So, what I am

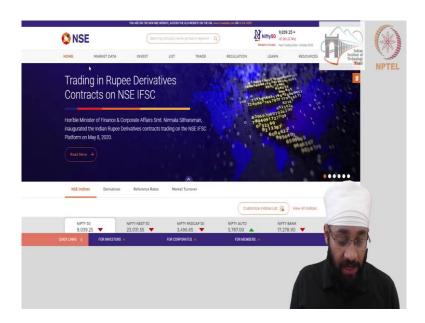

going to do is go to a web browser and look through some of these websites and help you understand how to look for such numbers.

(Refer Slide Time: 01:46)

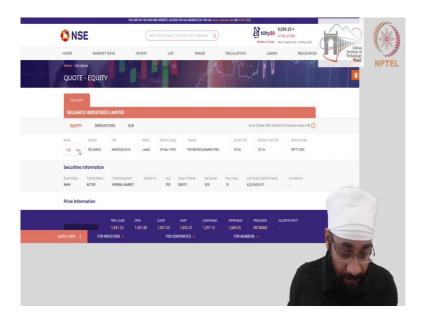

So, I go to my browser and we can go to NSE India, I Google it. I find the first link; I click on this.

(Refer Slide Time: 01:49)

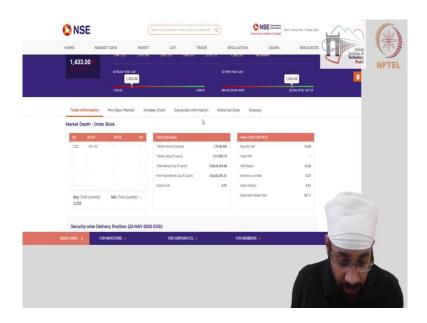

So, this is National Stock Exchange and you mostly have the stock market related data; purchase and selling of the shares. However, what we are interested in is the financial data.

(Refer Slide Time: 02:08)

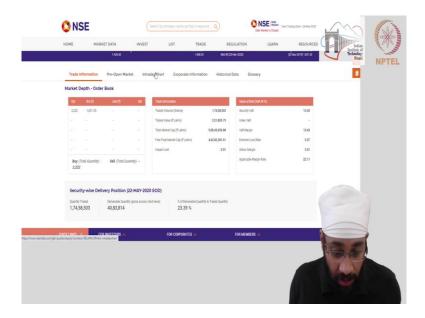

So, I am going to type the name of the company and our favourite company is Reliance Industries Limited and you have a quote for Reliance Industries Limited.

(Refer Slide Time: 02:14)

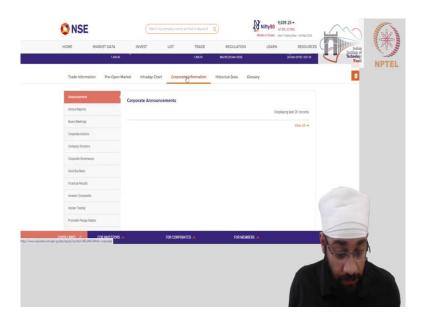

The quote is necessarily about the market prices and so on. But the initial information shows the PE ratio of Reliance Industries and we know what is price-to-earnings ratio; P E multiple. You have the industry or sectors PE given here as well. Anyways, this is not what we are after, we are after financial data and more numbers.

(Refer Slide Time: 02:43)

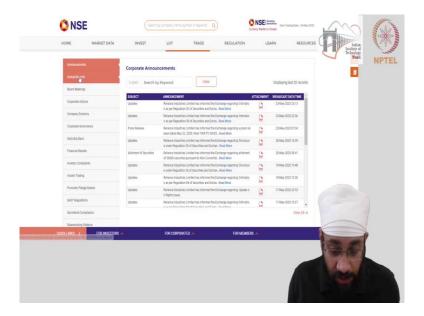

So, for that we can scroll down and get more information about the price that shares are selling at and some other technical terms and here you have a nice table.

(Refer Slide Time: 02:54)

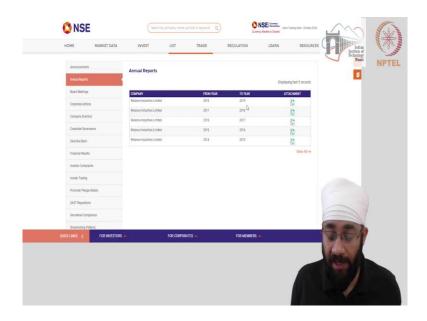

You click on corporate information and then you can look at annual reports of the company.

(Refer Slide Time: 02:55)

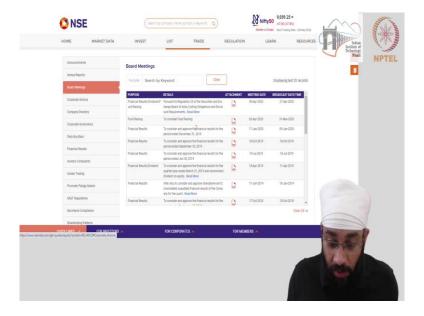

(Refer Slide Time: 02:59)

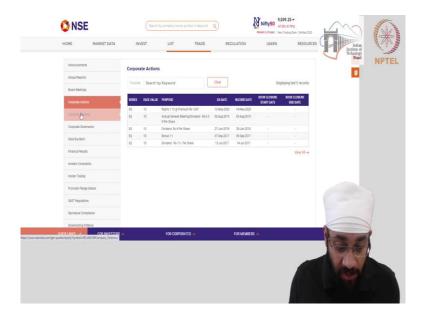

So, you click on the annual reports and you can download the reports, which you were looking at. This website does not have the report for financial year 19-20 which we were looking at, but you can access them at one place here.

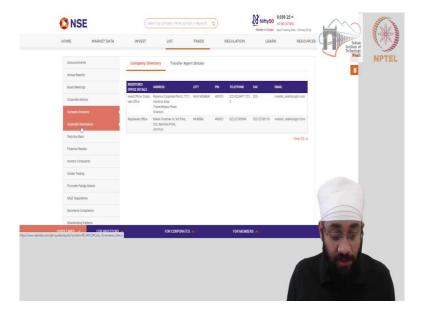

(Refer Slide Time: 03:16)

(Refer Slide Time: 03:17)

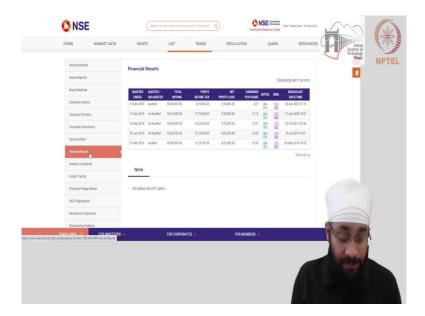

(Refer Slide Time: 03:19)

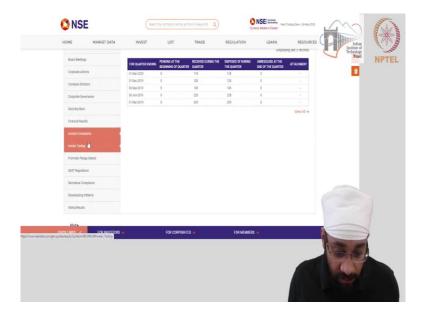

You can look at their board meetings details, the corporate actions some advanced terms which you may not know right now, do not worry about it.

(Refer Slide Time: 03:26)

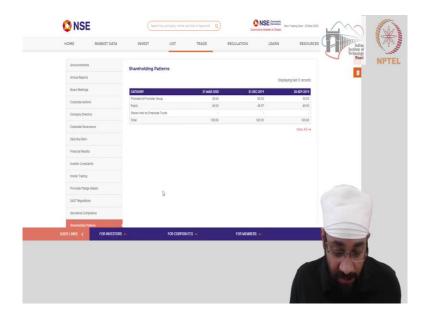

What are we interested in? We are interested in financial results; you go there and you can download the financial results of this company. So, this is one way of accessing the financials of this company.

(Refer Slide Time: 03:43)

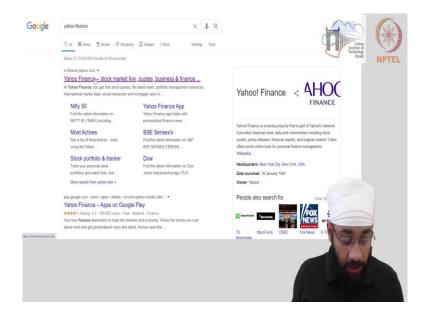

(Refer Slide Time: 03:47)

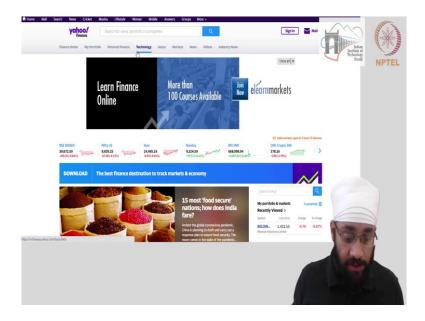

In addition to this you could go to investors complaints, shareholding pattern- who holds the shares in their company, what is the breakdown and so on. This is the kind of data that you will find on this website.

(Refer Slide Time: 04:03)

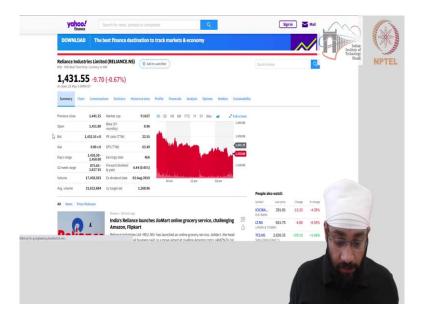

We can look at some more websites. Let us look at Yahoo Finance.

(Refer Slide Time: 04:05)

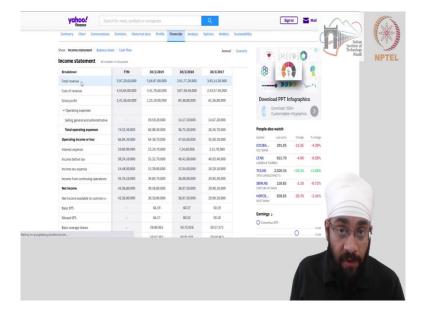

You click on the website and type the company of your interest, which is Reliance Industries Limited.

(Refer Slide Time: 04:11)

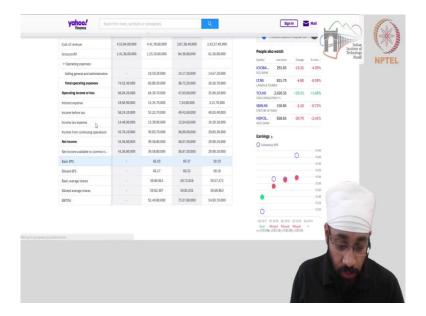

And it gives a lot of data. What is this? This is a summary. You can look at charts, statistics, historical, financial, and a lot of numbers. Let us see what we are interested in. In the landing page it gives you previous close, open bid, ask: this is about the share prices. You look at the second column, you have market capitalization which we know what it is. You have beta, which we do not want to talk about right now. P/E ratio is something we know, earning per share we know, those are the terms that we know.

(Refer Slide Time: 04:56)

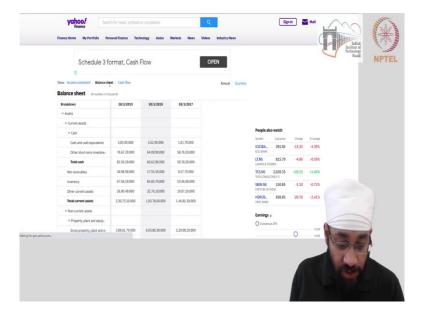

(Refer Slide Time: 04:57)

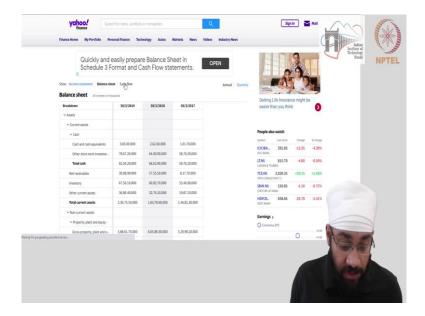

Now, what I want you to do is to go to financials first, where you will have the revenues and the balance sheet and income statement numbers. So, you can look at those numbers for last 3 years here.

(Refer Slide Time: 05:06)

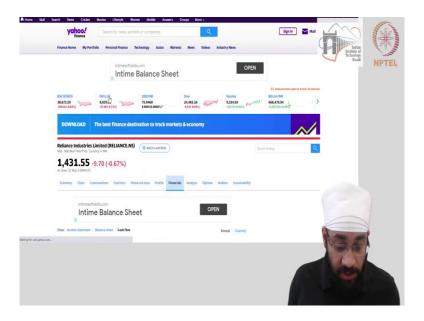

You can look at the income statement; you can look at the balance sheet, and the third statement which is cash flow, which we will discuss in the course further.

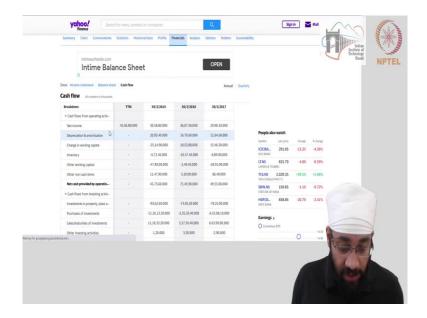

## (Refer Slide Time: 05:12)

(Refer Slide Time: 05:13)

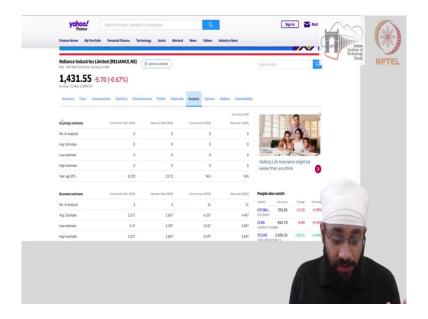

(Refer Slide Time: 05:14)

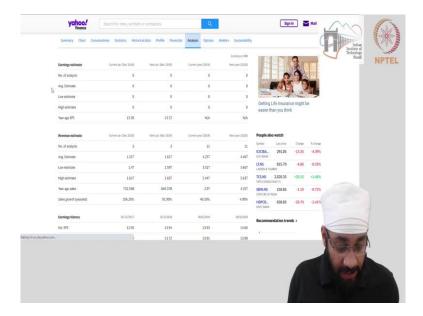

So, all these statements for the last 3 years are present here.

(Refer Slide Time: 05:20)

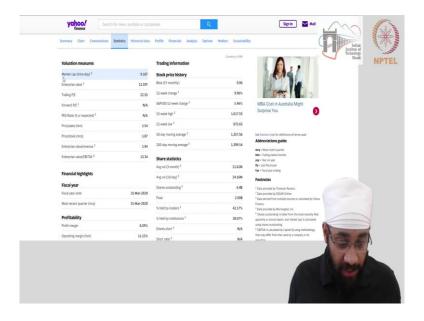

(Refer Slide Time: 05:23)

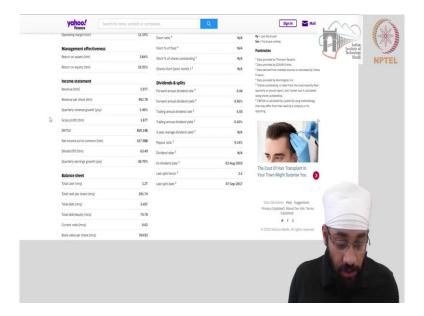

We want to look at the data indicators and so on. This is analysis, this is actually Yahoo finance team's analysis of this company, what do they think is going to happen to the earnings and so on.

(Refer Slide Time: 05:34)

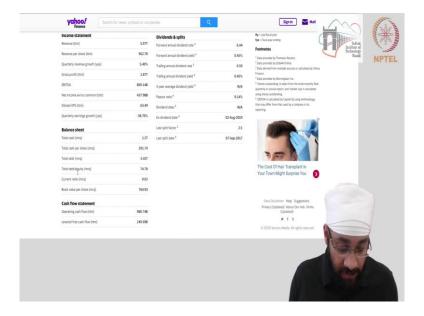

You go to statistics; statistics is where you find the indicators, the financial ratios that we are after.

(Refer Slide Time: 05:48)

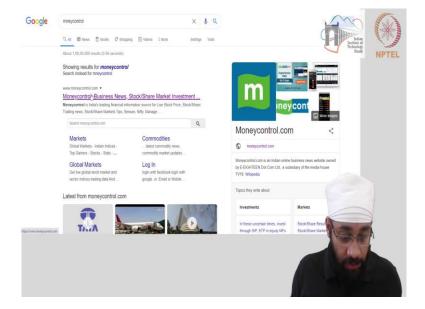

So, here you have P/E and you have price to book ratio and number of other advanced financial indicators are also here. Profitability: profit margin, operating profit margin you know this. Management's effectiveness, this is the efficiency ratio, return on asset, return on equity.

(Refer Slide Time: 06:07)

You have income statement numbers here, EBITDA you know this. Balance sheet numbers, current ratio is here, debt to equity is here. Then you have dividend and splits, you have payout ratio, dividend dates are here. So, a number of details are given here and whatever numbers you are interested in you can look at these numbers. So, that is Yahoo Finance.

## (Refer Slide Time: 06:37)

(Refer Slide Time: 06:38)

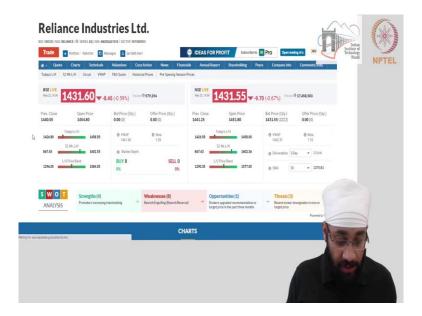

We can also look at moneycontrol.com. You can again look for a search box.

(Refer Slide Time: 06:43)

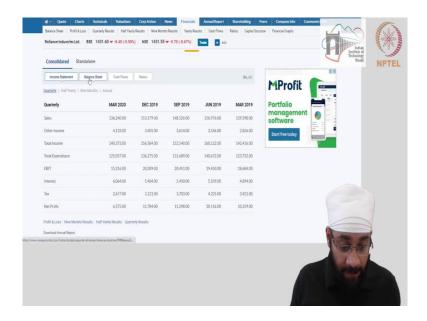

Do we have a search box somewhere where you could search for Reliance Industries Limited?

(Refer Slide Time: 06:52)

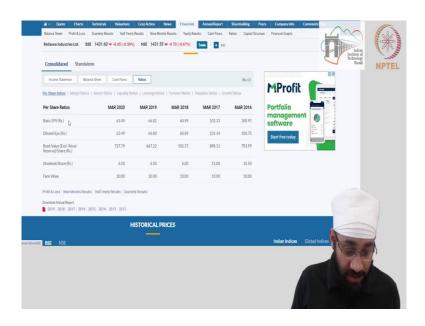

There again it shows you a similar kind of dialog box. What you are interested in are the financials of the company.

(Refer Slide Time: 07:00)

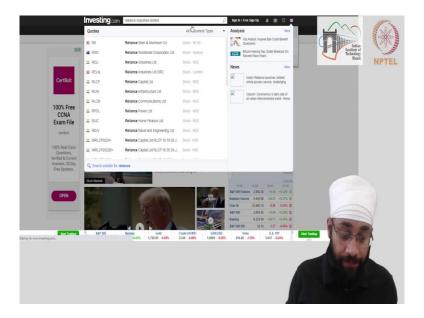

You click on financials and you have sales, other income and so on. Then you can click on related tabs, it shows you everything here and you have a tab for ratios.

(Refer Slide Time: 07:11)

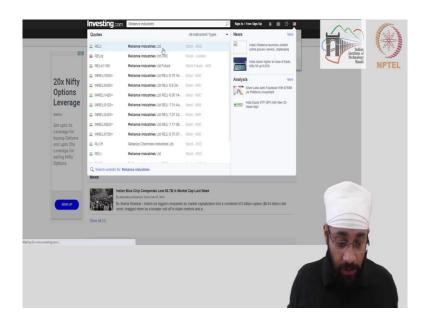

You click on ratios and you have relevant ratios that they want to show. Dividend per share, book value, EPS. You can further look into this website you will find more data.

(Refer Slide Time: 07:33)

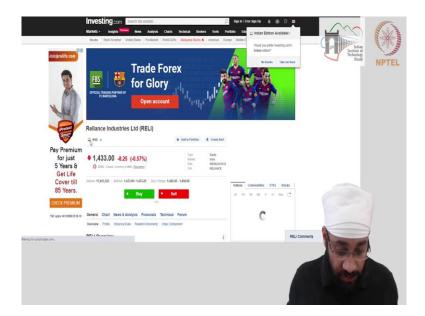

So, other than this we have investing.com which should also be interesting. In investing.com I will again do the same thing. Look for Reliance Industries Limited.

(Refer Slide Time: 07:43)

Let me do a new search for RIL. There you go, India's company Reliance Industries.

(Refer Slide Time: 07:59)

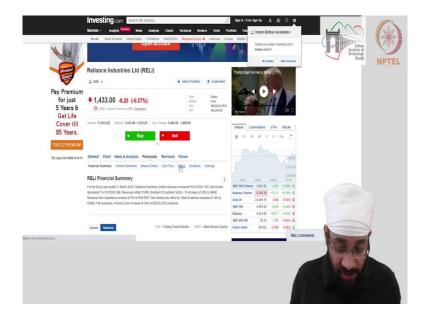

(Refer Slide Time: 08:00)

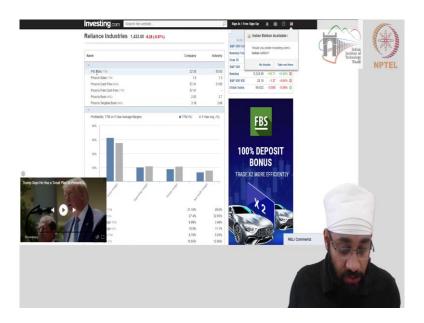

You have this quote, again these are movements in share prices.

(Refer Slide Time: 08:11)

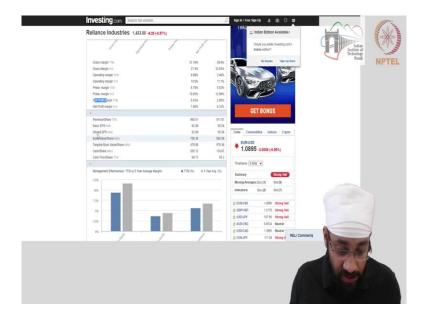

So, what we are interested in is financials and in financials, we want to look at ratios. You have the ratios here.

(Refer Slide Time: 08:17)

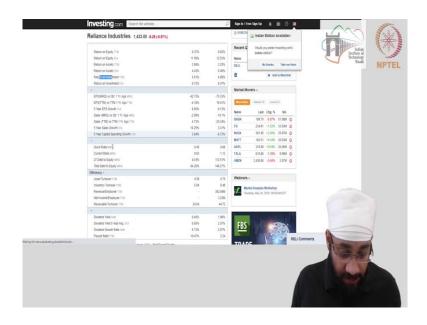

What ratios do they show us? You have P/E ratio and then all different kinds of ratios they have calculated, you have gross margin, operating margin, net profit margin.

(Refer Slide Time: 08:24)

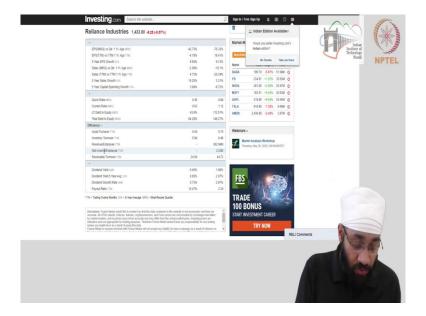

(Refer Slide Time: 08:31)

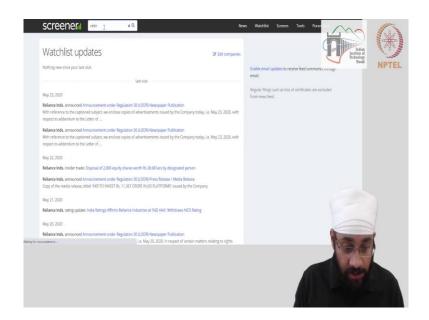

You know about all of these ratios return on assets, return on investment, quick ratio, current ratio.

(Refer Slide Time: 08:36)

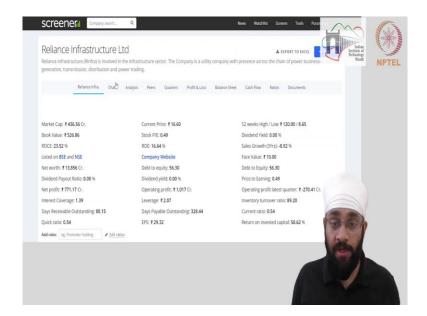

All I am trying to say is what we have discussed is practiced in the industry as well. So, if you have gone through the videos carefully you have learned these ratios, you should be able to go through these websites and learn a lot of things. The best website is screener.in.

(Refer Slide Time: 08:54)

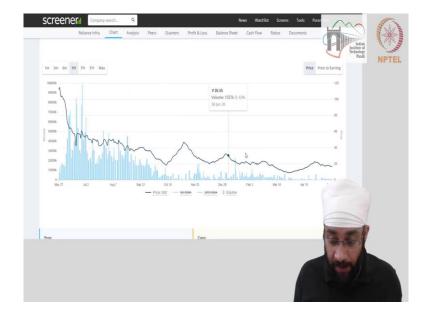

You will need to register and login into this and I am already logged in.

(Refer Slide Time: 09:04)

When I log in, I can search for my company, here is my company. This according to me provides very nice nicely curated content on the financial statements of the companies, ratios, and analysis. It also gives you an option to compare against the peers, against the competitors. That is what I like about this website.

(Refer Slide Time: 09:25)

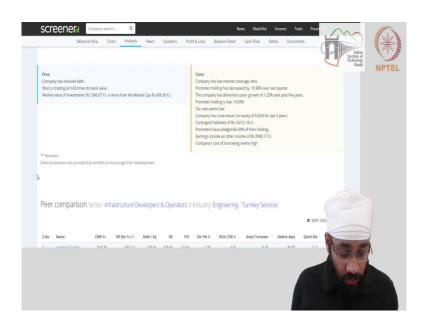

On the top of the dashboard, you have a list of ratios, some numbers, everything that these people think is relevant. You could edit and you could customize this dashboard for you. Access to a certain level is free on the website, but beyond a level if you want to look at more

advanced analysis, comparisons with peers etc., then you have to pay and get a subscription. But for your purpose, you can very much use the free version, you do not have to worry about that. So, this is the share price.

(Refer Slide Time: 10:04)

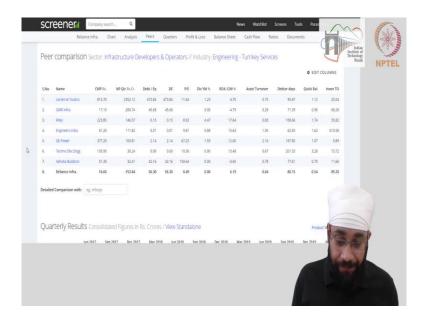

(Refer Slide Time: 10:06)

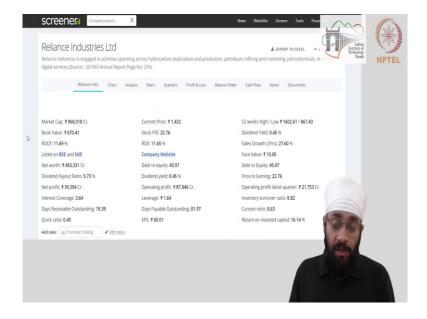

You can change the duration for which you want to look at the share price.

(Refer Slide Time: 10:08)

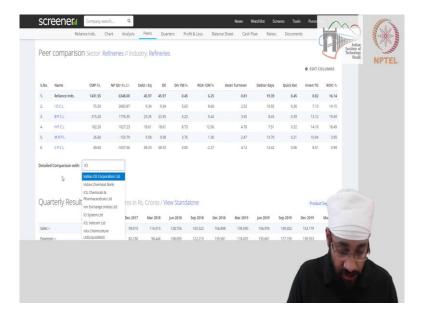

But we are interested in ratios, here is a peer comparison. So, peer comparison of Reliance Industries, by the way we are looking at Reliance infrastructure, we are interested in Reliance Industries.

(Refer Slide Time: 10:21)

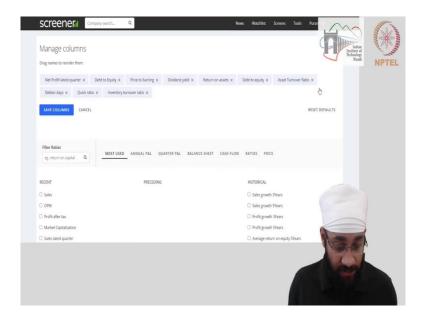

(Refer Slide Time: 10:25)

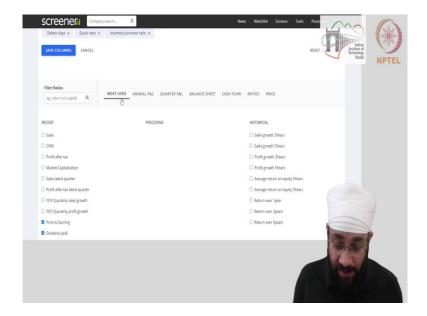

So, Reliance Industries here; let me go to the peer comparison. You have other five companies which are in the same sector, same industry; the competitors. This is the current market price. This is the net profit in the last quarter which will be quarter four of 2019-20. This is debt to equity ratio, this is also debt to equity ratio, we have price—to-earnings ratio, dividend yield, return on assets, asset turnover, debtor collection period, this is quick ratio, this is stock turnover ratio: the numbers that you would like to see are all here.

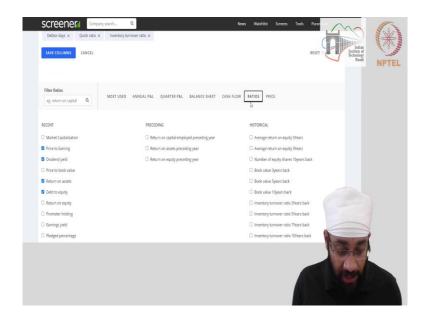

(Refer Slide Time: 11:02)

(Refer Slide Time: 11:04)

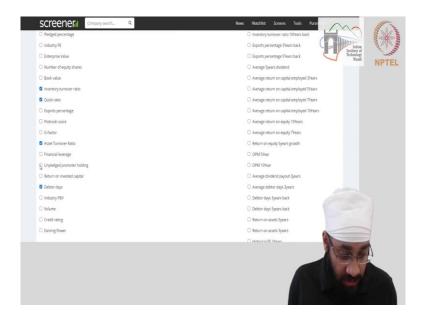

(Refer Slide Time: 11:06)

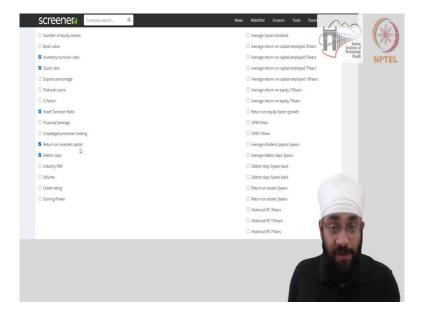

You could edit these columns, since I have logged in, I can edit these, this column and I can actually decide which ratios do you want to see.

(Refer Slide Time: 11:07)

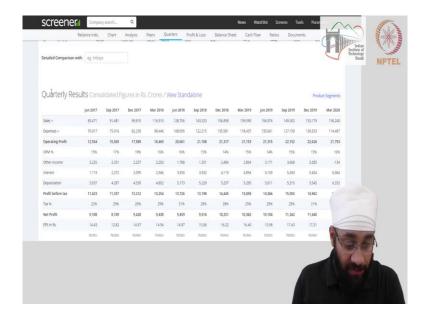

There are three-four numbers which by default are there, in that table. I can look through a list of ratios and select the ones which I want to see. So, there you go. You could use this table. Maybe I will click, maybe I do not want PE, because it already shows that debt to equity is also a default, but what I want is let us say which ratio; return on invested capital.

(Refer Slide Time: 11:34)

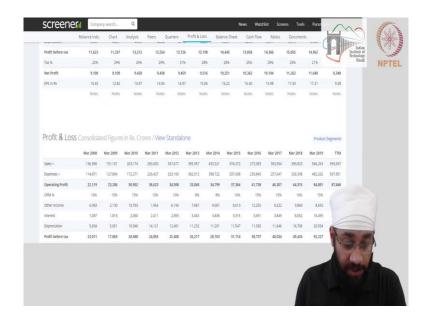

So, return on invested capital, save columns and now we are back, you go to peer comparison and we have return on invested capital here. But, it shows a limited number of columns, so you will have to drop one to see the other indicator.

(Refer Slide Time: 11:52)

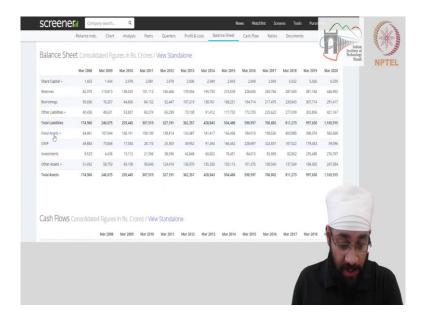

You also have quarterly results; you can view standalone or consolidated.

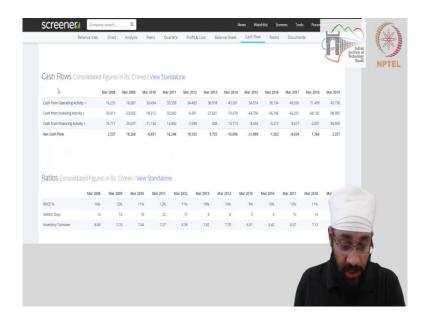

(Refer Slide Time: 11:56)

(Refer Slide Time: 11:58)

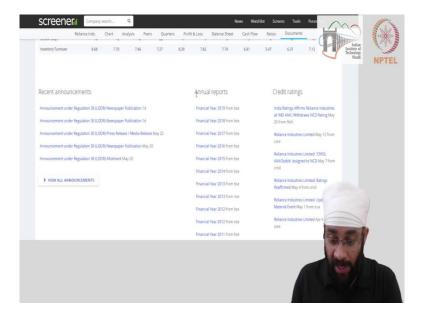

(Refer Slide Time: 11:59)

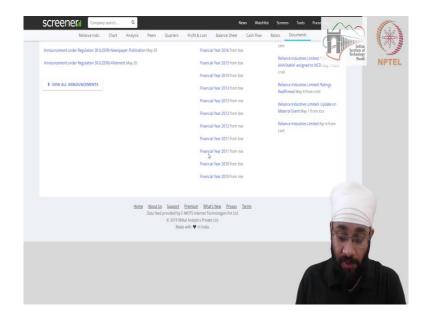

Profit and loss account is here, balance sheet is given, cash flow statement is also here then you have these ratios.

(Refer Slide Time: 12:01)

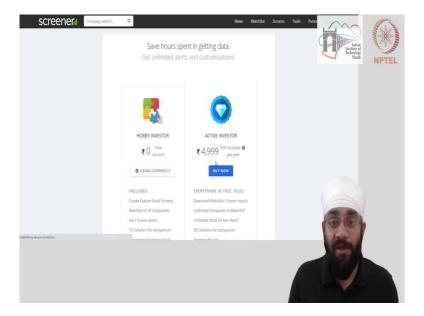

(Refer Slide Time: 12:04)

And then you know all the annual reports are also consolidated, brought to one place. You can download these numbers into Excel as well. But if you want more analysis, you want a detailed comparison with one of the companies, let us say IOCL, Indian Oil Corporation.

(Refer Slide Time: 12:26)

Now, you have to pay. So, some features are paid features, but you do not need to worry about that. If you need comparative data you can go to this website. I have not looked at Bloomberg, you could do that similar numbers are presented on such websites. So, there you go. In this video, we looked at a bunch of websites, where financial data is presented.

And what we have proved to ourselves, what we have established is that, these websites also report the numbers that we have learned. There may be some fancy numbers, some more advanced ratios, but once you know the basics you can very well figure out the definition of the other advanced ratios or fancy ratios or customized ratios, you could create your own ratios as well. Ratio after all is a mathematical relationship between two numbers. Throw in any two numbers and you can figure out a ratio, but is the ratio relevant to the business is the question. Accordingly, you could figure out whatever ratio works for a business, whatever information you are looking for if that ratio helps, you can use that ratio. Let me stop here. I will see you in the next video.
