**Professor Harshit Sosan Lakra**  
**Department of Architecture and Planning**  
**Indian Institute of Technology, Roorkee**  
**Lecture No. 55**  
**EIA - Environmental Management Plans**

Welcome to the course Environmental Impact Assessments. And in today's session, we are going to cover Environmental Management Plans. So, we have been seeing EIA methods and in many cases, we have also seen mitigation approach as well, domain-wise. So, today we are going to look at the environmental management plans.

And if you look at what the purpose of the environmental management plan is to mitigate the impact of the project. So, we have seen, how we assess various impacts, and when the impacts are there, and then we looked at the significance of the impact and if the impact is significant or it can be mitigated, then, really, what kind of mitigation measures we take and then that mitigation measure is covered in the environmental plan.

So, usually, the mitigation, if we see, have been seeing process mitigation is done through two approaches, one is through EIA, before the project comes up. So, we try to reduce the impact as much as possible, through our process, through the identification of things, and the other is through an environmental management plan.

So, when the project comes up, when the project starts running, then during the operational construction and all the phases of the project, we ensure that we adhere to all the environmental commitments we have made and all the mitigation measures we have committed to adopt for all the kinds of impacts which might happen in the project.

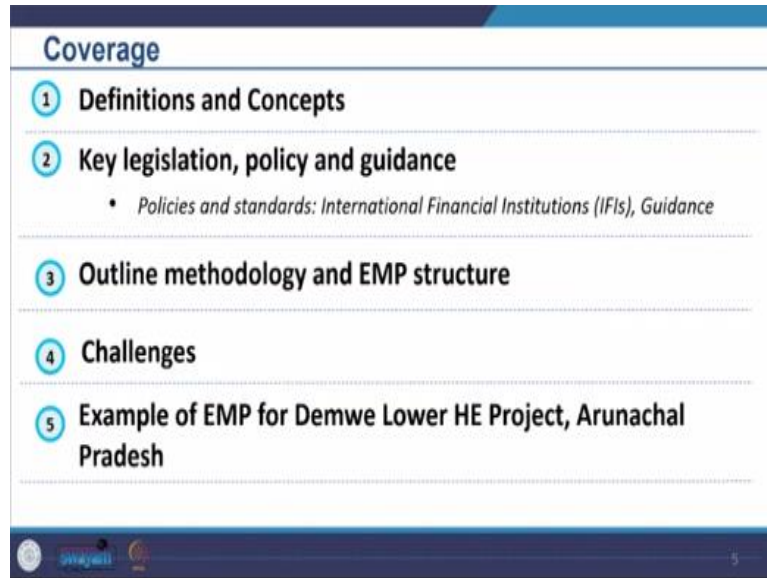

So, we see that the literature suggests that the practice of EMP Environmental Management Plans has evolved through like bottom-up approach. So, it did not come from the legislation or top-down approach. But, it came from the practitioners where practitioners started adopting and undertaking different mitigation approach and started developing related documents for that. So, EMP has been developed through practices where practitioners have adopted a wide range of practices.

So, you will see that since it is coming from a bottom-up approach, there is a wide variety range of practices and different kinds of plans, and even you will see this there are different terminologies also used in this domain. So, you will also see that there is also a difference in the scope of the kind of management plan.

So, even if that is how much they would cover, you will see that some of the management plans cover all the aspects of the project and also take care of all the stages of the project, and then management plan can also be just one stage, you might decide to take only one stage and the documents or you or a specific domain itself. So, it can the way it is prepared for the purpose it is prepared, the scope of the management plan can vary.

And in that also you can see that EMP can also be at the strategic or institutional level, or it can be at the project level also. So, we see that EIA is mostly at the project level, but EMP can be at the strategic level or the institutional level. So, you can take mitigation measures at the higher level, at the strategic level, policy level, and institutional level, as well as at the project level where the exact local impact project related impact or not. So, we are going to look into the details of this EMP today with examples.

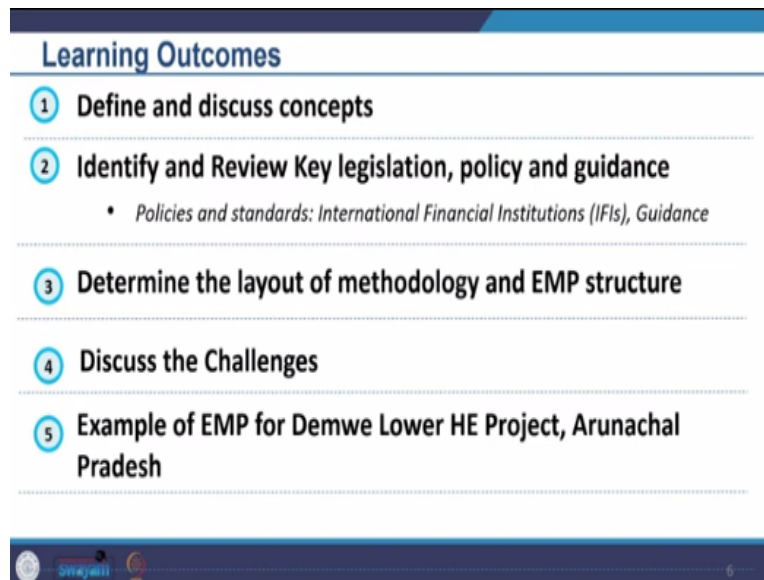

(Refer Slide Time: 4:29)

Coverage	
1	Definitions and Concepts
2	Key legislation, policy and guidance <ul style="list-style-type: none"><li>• Policies and standards: International Financial Institutions (IFIs), Guidance</li></ul>
3	Outline methodology and EMP structure
4	Challenges
5	Example of EMP for Demwe Lower HE Project, Arunachal Pradesh

So, our coverage would include as we will look into the definitions and concepts, and then we will look into key legislation policy and related guidelines. Then we will look at the methodology, the (kind) outline it has, and how EMP is structured. And then we will look at what kind of challenges are there and then we will also look at some of the examples of EMP from Arunachal Pradesh. So, we will look at that.

(Refer Slide Time: 5:09)

**Learning Outcomes**

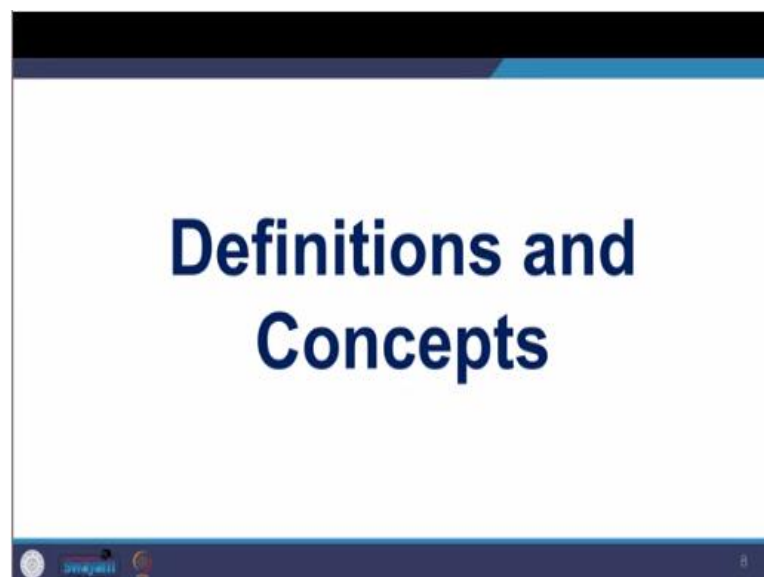

- 1 Define and discuss concepts
- 2 Identify and Review Key legislation, policy and guidance
  - Policies and standards: International Financial Institutions (IFIs), Guidance
- 3 Determine the layout of methodology and EMP structure
- 4 Discuss the Challenges
- 5 Example of EMP for Demwe Lower HE Project, Arunachal Pradesh

swepall

So, accordingly, the expected learning outcome is that after completion of this particular session, you should be able to define and discuss concepts, and you should be able to identify key legislation, policy, and guidance. You should be able to review what is happening in terms of EMP, and what kind of legislation policy and guidelines are there.

Further, you should be able to determine the layout of what kind of approach you have to adopt, and then what structure you would undertake for preparing EMP, and then you would be able to discuss the challenges involved. And then with the help of a case study, you can explain EMP, and how it is undertaken. So, that is the expected learning outcome.

(Refer Slide Time: 5:56)

**Definitions and Concepts**

swepall

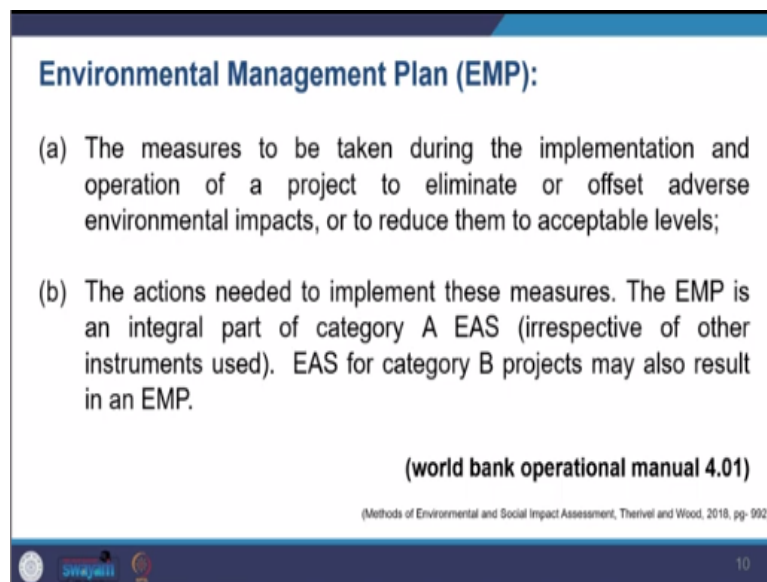

So, now looking at the definitions and concepts. EMP, EMP, if you look at EMP, it is the outcome of the EIA process. So, when you are doing the entire EIA process, you, as it is part of the output of the EIA process, are trying to identify what are the different impacts that are happening because of your activities, and then which impacts you can, are not significant, but there are certain impacts significance, but which can

be handled with the mitigation measures. So, what measures you will take, becomes very much part of the EIA process.

So, it is the EMP also summarizes mitigation, compensation, what kind of compensation would be given, how it will be monitored, and how, what kind of improvements are happening in the environment are also measured here. And this EMP is a document like the EIA report we have been talking about. So, EMP is also a document, it can be a document part of EIA, or it can be an independent document. This document indicates the actions needed to manage environmental and social effects, which are linked with the construction, operation, and decommissioning of a project.

So, it also importantly includes the schedule for each activity, like what kind of activities are going to undertake, and when you will undertake plus, it also gives you the responsibility matrix, like for a certain activity, who will be responsible for undertaking that activity.

(Refer Slide Time: 7:51)

**Environmental Management Plan (EMP):**

- (a) The measures to be taken during the implementation and operation of a project to eliminate or offset adverse environmental impacts, or to reduce them to acceptable levels;
- (b) The actions needed to implement these measures. The EMP is an integral part of category A EAS (irrespective of other instruments used). EAS for category B projects may also result in an EMP.

(world bank operational manual 4.01)

(Methods of Environmental and Social Impact Assessment, Therivel and Wood, 2018, pp- 992)

10

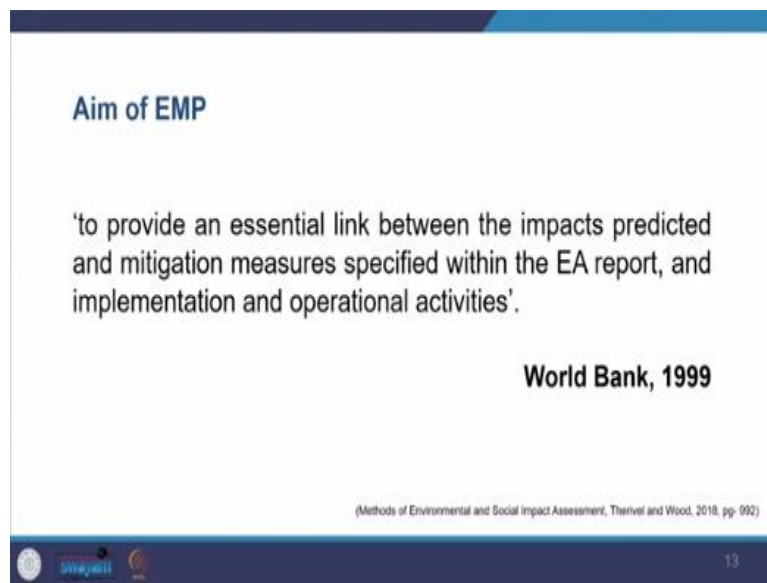

So, the Environmental Management Plan as per the World Bank Operational Manual, we see it says that it is an instrument that provides you the details, details of the measures to be undertaken during the implementation, and operation of a project to eliminate or offset adverse environmental impact, or to reduce them to acceptable levels. So, it gives you the details of all the measures, which you are going to implement during the project.

And then if Part B, we see that it includes the actions needed to implement these measures, the ANP is set to be an integral part of Category 8. So, if you remember, Category A and B, are also the major projects that will be dealt So, for that an EMP has to be an integral part of an environmental assessment report. Irrespective of other instruments used you have to make EMP part of the IEA and EIA for Category B projects may also result in an EMP. So, for Category B also, you might need EMP. So, this is what we see here. So, that was about the definitions and concepts related.

So, if we further look out at the historical context of this, we see that EMP as I also mentioned before, has been a practice-led initiative, and the World Bank and the Environmental Agency of Europe, introduced environmental mitigation plans into the environmental assessment, and operating directives. So, it all happened in 1991.

And you will see that the concept evolved within World Bank documentation and then it was it came into practice. Here it was referred to as environmental mitigation or management plans and that is how we know about environmental management plans, and they also came up with guidance on what should be covered in an EMP.

(Refer Slide Time: 10:14)

So, if you look at the broader aim of an EMP, the broader aim of EMP is to provide an essential link. So, you see how it connects with the EIA. So, you see that it is an essential link between the impacts predicted and mitigation measures specified within the EIA report. So, this is the EMP this document is the link that allows you to connect the impact and the mitigation and it allows you to take care of the implementation and operation of various activities.

So, you would also find the term Environmental and Social Management Plan. So, you would also see ESMP which would not just include the environmental aspect, but also what kind of management plan will be prepared for the social aspect as well. So, that term also you would find, and these both EIA, or you call it ESMP, they are seen as a bread element of bridging the gap between EIA and the real world implementation of the project.

So, whatever you are doing process on the table you are doing, but it helps you to really implement on the ground through the project, and then take care of all the environmental aspects. So, within this EMP, you also try to incorporate the social dimension, like I said it is also called ESMP, Environmental, and Social Management Plan.

So, social impact assessment is like we have already seen, we have looked into the legislative aspect, and we have looked into new methods aspect for social impact assessment. So, that we have seen, but when we look at the social management plans, that is like the idea is very recent, but it is evolving, and it is being reinforced a lot. So, you will see that now social management plans are becoming stronger, and they have been reinforced a lot too, even though they are very recent developments.

(Refer Slide Time: 12:32)

**Key Legislation,  
Policy and Guidance**

18

**Key Legislation, Policy and Guidance**

- Key players are International Financial Institutions and investment banks.
- There is no legislative requirement to produce ESMP explicitly,
- **Sections**
  - a) Selected examples of national legislation.
  - b) Outlines key policies and standards.

(Methods of Environmental and Social Impact Assessment, Therivel and Wood, 2018, pp- 992)

18

So, now looking at certain key legislation, policy, and guidelines, that deal with the EMP. We see that the key players in this domain are again, the IFC World Bank, the institution here, and all the investment banks. So, you might not find very strong legislative requirements in countries, but also because of these institutions coming in, it is in practice, translated. So, one key reason is that.

(Refer Slide Time: 13:16)

## Selected Examples of related Legislation

- Hong Kong, the Environmental Monitoring and Auditing component of the EIA Ordinance.
- South Africa -National Environmental Management Act (Act No. 107 of 1998).
- Netherlands, the Environment Management Act 1994.
- Canada – Canadian Environmental Act 2012.
- UK, EU EIA Directive (EC 2014).

(Methods of Environmental and Social Impact Assessment, Thérivel and Wood, 2018, pp- 992)

23

Then you also see that countries like you have Hong Kong, which has an Environmental Monitoring and Auditing Component, which makes provision for EMP. Then you also see in South Africa - the National Environmental Management Act, and then in also Netherlands, the Environmental Management Act of 1994. All of these make provision for EMP. So, you also see in Canada that, the Canadian Environmental Act 2012 has also made provision for EMP. Likewise, you can see in the UK also the EIA, a directive EU EIA directive also has included mandatory monitoring for significant adverse effects in their specified articles.

(Refer Slide Time: 14:09)

(Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii)  
MINISTRY OF ENVIRONMENT AND FORESTS  
New Delhi 14-September, 2006  
Notification

**ANNEXURE I**  
(Environmental Impact)

10. Environment Management Plan

The Environment Management Plan would consist of all mitigation measures for each item wise activity to be undertaken during the construction, operation and the entire life cycle to minimize adverse environmental impacts as a result of the activities of the project. It would also delineate the environmental monitoring plan for compliance of various environmental regulations. It will state the steps to be taken in case of emergency such as accidents at the site including fire.

**APPENDIX III A**  
(See paragraph 7)

**CONTENTS OF SUMMARY ENVIRONMENTAL IMPACT ASSESSMENT**

The Summary EIA shall be a summary of the full EIA Report condensed to ten A-4 size pages at the maximum. It should necessarily cover in brief the following Chapters of the full EIA Report -

1. Project Description
2. Description of the Environment
3. Anticipated Environmental impacts and mitigation measures
4. Environmental Monitoring Programme
5. Additional Studies
6. Project Benefits
7. Environment Management Plan

24

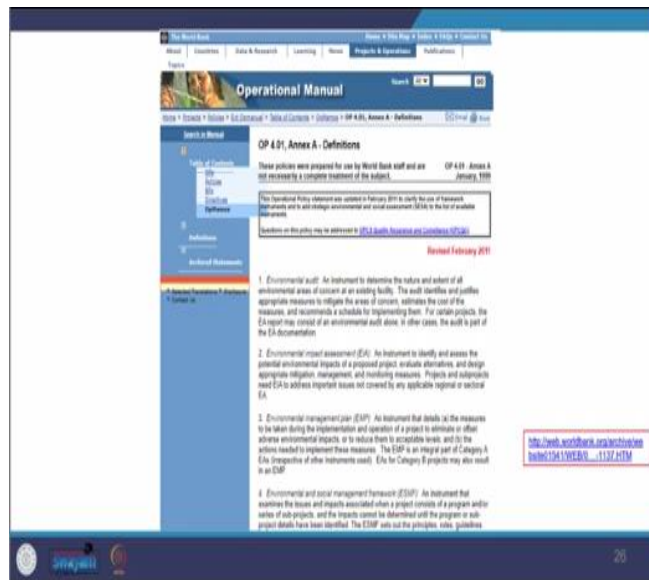

So, in India, if you look at in India, if we look at EIA Notification 2006, you can see that it identifies and says that within its checklist environmental impact, environmental management plan, and monitoring program have to come and it defines if you look at number 10 here point 10, it defines Environment Management Plan, Environment Management Plan would consist of all mitigation measures for each item-wise activity to be undertaken during the construction, operation and the entire life cycle to minimize adverse environmental impacts as a result of activities of the project.

It would also delineate the Environmental Monitoring Plan for compliance with various environmental regulations. It will state the steps to be taken in case of emergencies such as accidents at the site including fire. So, you will see how all mitigation measures for each item-wise activity have to be (under) whatever has to be undertaken in different phases have to be detailed in the Environmental Management Plan.

And then if you also look at Appendix 3 A, you will see that content of the summary Environmental Impact Assessment, you would see that the EIA needs to have all these 7 components which you can see project description, description for the environment, and in the last you can see Environment Management Plan so, it becomes very much part of the EIA report.

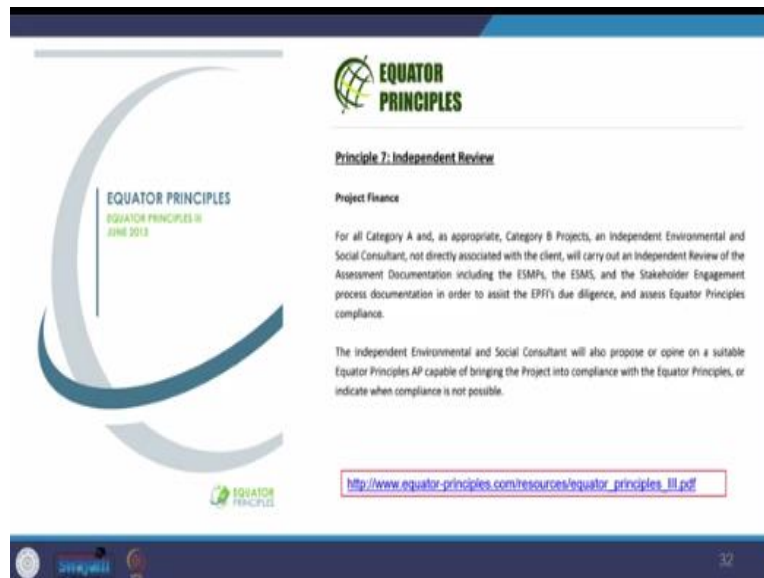

(Refer Slide Time: 15:54)

So, you would see that, as I mentioned before also EMPs are listed and operational procedures are manual of 4.01 as an instrument used to were used for compliance with the bank's environmental assessment requirements. So, within that, I have given you the link to this you can look at this and you can see point number 3 which describes the Environmental Management Plan which we saw in the beginning where we define Environmental Management Plans that also gives you an operational manual.

So, the projects that seek all this international funding have to adhere to this. So, in particular, you can review International Finance Corporation Performance Standards 1, 2, and 8, which all highlight the importance of EMP, how to manage the environment, and also look at all the performance environmental performance and social performances. So, EMP is also interlinked with IFC Environmental Health and Safety Guidelines. So, you see how it is interwoven within if it is how, why it becomes mandatory almost practically, to design EMP and to implement it.

(Refer Slide Time: 17:09) 17:37, correct

The slide features a large stylized 'E' logo on the left, composed of blue and grey curved lines. To its right, the text reads 'EQUATOR PRINCIPLES' and 'EQUATOR PRINCIPLES III JUNE 2013'. The main content area on the right is titled 'EQUATOR PRINCIPLES' with a globe icon. Below this is 'Principle 7: Independent Review' and 'Project finance'. The text describes the requirement for an independent review of assessment documentation (ESMPs, ESMS, and Stakeholder Engagement process documentation) for Category A and B projects. It also states that the Independent Environmental and Social Consultant will propose or opine on a suitable Equator Principles AP capable of bringing the Project into compliance with the Equator Principles, or indicate when compliance is not possible. A URL is provided at the bottom: [http://www.equator-principles.com/resources/equator\\_principles\\_III.pdf](http://www.equator-principles.com/resources/equator_principles_III.pdf). The slide footer includes logos for Equator Principles, IFC, and others, along with the number '32'.

So, that as well you can see the Equator Principles. We have also seen this before, so the Equator Principle also provides a financial industry benchmark for determining ways to assess and manage social and environmental risk, and wherever they do the project financing and then one needs to look at the key principle here which deals with Environmental and Social Management System and Equatorial Principle Action Plan.

So, you can also see under principle 7 also, there is an independent review, which also deals with the due diligence process. So, where you have you create assessment documentation, where you need to, or where you when you provide assessment documentation, it involves EIA report, it involves EMP report. It also involves a management system and further how you are engaging with the stakeholders in the entire process also needs to be documented. So, looking at this due diligence process and all these self-assessment documentation, within that also you see EIA and EMP become important documents.

(Refer Slide Time: 18:36)

**Guidance**

- International Council for Mining and Metals (ICMM).
- Design Manual for Roads and Bridges (DMRB) UK.
- The International Association for Impact Assessment (IAIA)- Social Impact Management Plan (SIMP) .
- The Institute for Environmental Management and Assessment (IEMA) -'Best Practice Series', Environmental Management Plans.

(Methods of Environmental and Social Impact Assessment, Therivel and Wood, 2018, pp- 992)

34

So, a lot of institutions give guidance on how to prepare for EMP. So, you will see International Council of Mining and Metals also provides guidelines within their sector. Then you also see Design Manuals for Roads and Bridges also provide input on this. As well as you see International Association for Impact Assessment IAIA also gives you input guidance on the Social Impact Management Plan, though they have not developed anything on EMP, they do give input on the Social Impact Management Plan, plus you see Institute for Environmental Management and assessments, 'Best Practice Series', so they also give inputs on Environmental Management Plans.

(Refer Slide Time: 19:21)

**Typical SIMP Content (Vanclay ct al. 2015)**

Chapter title	Description of chapter contents
Cover	
Inside front Cover	Publication statement indicating the authors (i.e. names of the individuals responsible for doing the work and writing the report), publisher, date of publication and other information to establish the nature and purpose of the document.
Executive Summary	A short statement of key issues and findings.
Expert review statement	A letter/report from any expert or peer reviewer (or perhaps a joint statement if there were several reviewers) to indicate how the review was conducted, what constraints applied to the reviewers, and any comments, concerns and recommendations of the reviewers. A response from the authors to the review might also be appropriate.
Introduction	A general introduction to the report making the purpose of the report clear, perhaps including a short general statement about how the document connects to SIA literature/philosophy.
Project Summery	A good description of the project and all ancillary activities so that readers can get a sense of the project. Where project alternatives or options exist, they could be explained here.

(Methods of Environmental and Social Impact Assessment, Therivel and Wood, 2018, pp- 1097)

35

### Typical SIMP Content (Vanclay et al. 2015)

Chapter title	Description of chapter contents
<b>Methodology</b>	A statement about the overall design of the SIA, what methods were used, what community engagement processes were used, and how ethical issues were considered and addressed. Perhaps definitions and/or a discussion of key concepts, and some link to the SIA and social research literature would be expected here. A discussion of the governance arrangements for the conduct of the SIA should be provided. Importantly, the limitations of the applied methodology would also be included, including decisions to narrow or expand the scope over the course of the SIA.
<b>Applicable legal frameworks and standards</b>	A discussion of the legal framework(s) and applicable legislation, regulations and guidelines that apply to the particular case. This would include not only local legislation/regulation, relevant institutions and their responsibility towards the project, but also mention of international standards, such as the IPC Performance Standards, guidance from international industry organizations, and reference to the IA1A guidance for SIA.
<b>Community profile and social baseline</b>	If an extended community profile and social baseline are to be included as appendices, then at least include a summary of key characteristics and key stakeholder groups here; alternatively include the community profile and baseline data here. Key historical issues should also be discussed. Key aspects of the physical environment that may be relevant to understanding the context should be included too.

(Methods of Environmental and Social Impact Assessment, Therivel and Wood, 2018, pp- 1008)

### Typical SIMP Content (Vanclay et al. 2015)

Chapter title	Description of chapter contents
<b>Scoping report</b>	A statement of all potential social impacts considered in the assessment phase. The disposition of each impact considered should be made clear. Where this is presented as a separate report, a summary should be provided. Alternatively, this can be an appendix. This is a listing of the residual impacts with a discussion of how different stakeholders are affected. There should be a particular focus on indigenous peoples, women and vulnerable groups.
<b>Prioritised listing of key social impacts</b>	If resettlement is required, or physical or economic displacement will occur, a short description of how the resettlement process will be undertaken, what compensation will be provided and how it will be determined, and what measures will be taken to restore and enhance livelihoods. A fully developed Resettlement Action Plan will be required as a separate document.
<b>Resettlement (Summary)</b>	A list of mitigation and other management measures to address social issues should be provided. There should be a costing and timeframe for implementation for proposed mitigation measures.
<b>Summary of mitigation and management measures</b>	A list of mitigation and other management measures to address social issues should be provided. There should be a costing and timeframe for implementation for proposed mitigation measures.

(Methods of Environmental and Social Impact Assessment, Therivel and Wood, 2018, pp- 1009)

### Typical SIMP Content (Vanclay et al. 2015)

Chapter title	Description of chapter contents
<b>Monitoring plan and contingency plan (adaptive management)</b>	A plan for how monitoring will be undertaken - what will be monitored, how monitored, how often, and who is responsible, as well as how the company will respond should an allowance threshold be exceeded - needs to be provided.
<b>Benefit statement</b>	This is a statement of the likely project benefits to the local communities, including of all proposed social investment actions, and local content and local procurement strategies.
<b>Ongoing community engagement strategy and grievance mechanisms</b>	A description of the intended ongoing community engagement processes. Also a description of what grievance mechanisms will be provided and what processes will be used for managing grievances.
<b>Governance arrangements</b>	A discussion of the governance arrangements that will apply to the ongoing community engagement processes, the grievance mechanisms, the monitoring process, and to ensure the ongoing acceptability of the social investment programme.
<b>References</b>	A list of all references used in the report, and any key references that informed the design of the SIA research.
<b>Appendices</b>	The appendices that are to be included will vary from project to project and will be affected by what is included in the body of the report but may include: questionnaires, interview schedules, consent form templates, an extended community profile, baseline data, and a scoping report (i.e. a listing of all issues considered as possible social impacts).

(Methods of Environmental and Social Impact Assessment, Therivel and Wood, 2018, pp- 1009)

So, we can just go through this, we can see the typical content of Social Impact Management Plans. So, here you can see that it is the structure of the report, which you prepare which has the cover in where and then like all the details about the publication statement, then you might you would required to have executive summary where you tell what are the key issues and findings and then you would have expert review

statement; the reviewers who would give the statement a letter report from any expert or peer reviewers to indicate how the review was conducted.

Then you would be introducing a general introduction to the report making the purpose of the report very clear, then you would give the project summary of what is about the project that we need to know. And then you need it to give you methodology like, what is the overall design? And then you would also give the legal framework and standards that need to be given and then the community profile where the project-affected area is.

And then what is the scoping report? What did you find out from the scoping? And then what are the key social impacts you are looking into? And then what is the resettlement if it is happening? So, the summary of that and summary of mitigation and management measures, a list of all the measures mitigation, which we will be doing monitor, and then you will prepare monitoring plan and also contingency plans, then you will also provide the benefit statement, the statement of likely project benefits to the local people, including all proposed social investment actions, local content or local procurement strategies. So, this also we had seen when we talked about social impact assessment.

And then ongoing community engagement strategy and how you would be addressing all the grievances and then what kind of arrangement you have for governance and all the related documents and what are your key references have to be given here.

(Refer Slide Time: 21:27)

## Outline Methodology and EMP Structure

Now moving on to the other segments, we are going to look at the methodology, and how it would be and then we will look at the EMP structure. So, whenever you undertake EMP, certain things have to be taken care of and then have to be ensured in the management plan.

(Refer Slide Time: 21:46)

### Outline Methodology and ESMP Structure

- Contractual Agreement
- Competent environmental professionals
- Collaboration with stakeholders
- Stakeholders Engagement
- Distribution of Roles and responsibilities
- Identification of key documents / references
- Procedure
- Approach to non-compliance

(Methods of Environmental and Social Impact Assessment, Theveit and Wood, 2018, pp-1011)

So, one is that it has to undergo contractual agreements with the involved people because they have to agree to undertake this so there should be contractual agreements, and then whatever mitigation measures have been identified have to be included in the project budget. So, the cost of mitigation and implementation all have to be included, for example, if the training is required, if awareness is required, and all kinds of auditing, monitoring, wherever the cost is involved, that is taken care of, so that it does not fail later, because of non-consideration for those aspects.

Then, you also need to have competent environmental professionals involved in this, who can help you with the regular maintenance and auditing of the things and then you need to collaborate with the stakeholders, you need to have collaboration both with the team members within your project, where you are dealing with plus with the external from the stakeholders, from the authorities and so on, further you need to have

stakeholders engagement entire process while preparing the EMP and also while implementing and also while monitoring so that stakeholders engagement is needed.

Then you need to have a clear-cut distribution of roles and responsibilities, what activities will be undertaken, and who will take it. So, within this, you need to also identify the key documents and references because things have to be monitored and there will be people involved taking care of it.

So, relevant handling and control system has to be worked out as what legislation to refer to, what standards to refer to, and what kind of permits and licenses the development, the project has to be well documented, and what kind of procedure will be adopted for reporting, for monitoring and at what stage it will be adopted that all needs to be given. Plus you need to see if the non-compliance happens, what will be the approach in case of noncompliance So, if noncompliance happens, it has to be taken care of in the EMP as well as in the contractual agreement also, what if the person does not do then what kind of consequences will be there.

(Refer Slide Time: 24:14)

Now looking at the challenges involved challenges, there are several challenges when using EMP. So, one, you will see that it has to be put into practice. So, and you will also see that all the time the standards, policies might be changing in the life period of the project. So, there is still a need for environmental management responsiveness which can adapt to the changing environment.

So, something you are predicting for the future, but things might keep on changing so your EMP also needs to be adjusted should be adaptable accordingly. And then you also need to have a system to manage environmental impacts. You also need a system to carefully monitor and take care of all the requirements and periodic evaluations and what kind of performance, environmental performances are going on, how you will undertake measures and all these are very complex and intricate.

(Refer Slide Time: 25:15)

So, now looking at the example of EMP. So, we will look at the example of the Demwe Lower Hydro Electrical Project, which is from Arunachal Pradesh. So, I will be sharing this document with you in the forum.

(Refer Slide Time: 25:34)

So, we are going to look at the Environmental Management Plan for the 1750 megawatt Demwe lower hydro electrical project from Arunachal Pradesh.

(Refer Slide Time: 25:48)

• The project is located about one km upstream of **Brahmankund bridge** on NH 52 and falls in **Lohit district** of the State of **Arunachal Pradesh**.

• The catchment and influence zone for proposed Demwe Lower HEP lies in **Mishai Hills region** inclusive of foothill regions of Lohit Basin and varies from lowest elevation of 302 m to maximum elevation of 6,382 m amsl.

Salient features of the project	
State	Arunachal Pradesh
District	Lohit
River	Lohit
Access - Airport	Dibrugarh - 215 km
Access - Rail head	Tininkia - 160 km
Access - Road head	Parasuram Kund - 1 km
Average rainfall	3000 mm
Reservoir- Maximum Water Level	424.80 m
Reservoir- Minimum Drawdown Level	408.00 m
Dam- Type	Concrete Gravity

• The entire catchment of Demwe Lower Hydroelectric project is a storehouse of the large array of diversity in timber, fuel, fodder, food, fiber, wild fruit, vegetables and medicinal plants which are naturally or artificially growing in the region.

• The vegetation of the valley remarkably varies due to various microclimatic and ecological factors.

• The landslides occur occasionally on the ridge tops, along steep valley channels and along the roads in the entire impact zone.

• The dense forest covers 47.57 % and the open forest covers 28.75% of the area.

• The river/ water bodies cover 1.70% of the area.

Layout map of Demwe Lower Hydro Electric Project

So, this is located and Brahmankund Bridge on National Highway 52. You can look at the maps here in Lohit, district of Arunachal Pradesh. You can also see the layout map of the Demwe Lower hydroelectric project. If you think about the Northeastern area of Arunachal Pradesh, so it is rich in diversity in biodiversity in terms of all the resources it has. Then, it has dense vegetation, forest, and a lot of water bodies, which are there. So, think of any kind of construction coming there and what kind of impact it might have and then how EMP can take care of it.

<b>CHAPTER 8: RESTORATION OF CONSTRUCTION AREAS AND LANDSCAPING</b>		
8.1	INTRODUCTION	8.1
8.2	DISAPPROVED SITES AND THEIR RESTORATION	8.2

So, I have taken snips from the report and I will be sharing this report with you. So, you just look at the content of it. So, you have, you can see how segment-wise they have created all like for each segment they have specified introduced it, then they have conservation status and what are the major threats, then they have indicated the biodiversity conservation plan for biodiversity, then they have created wildlife management plan and then so exactly what actions would be taken.

And then Biodiversity Management Committee like who will be responsible, and then cost estimation like we said that the cost has to be undertaken within that. So, you see how each component is taken care of you can see the catchment area, and treatment plan here. So, it talks about it introduces what kind of approach they have adopted, and then what kind of estimation of soil loss is happening and they have used a particular methods silt yield index method, we have seen already different kinds of methods.

Then you can see watershed management, and what I kind of available techniques are there. And then what is their plan for cash material treatment, and then what is the cost estimate? So, likewise, you can see that every chapter is handling different, different components and see how intense it is. So, you see that you have a fisheries development plan, a public health delivery system, then you have solid waste management, and then you have provision for fuel and energy conservation, measures disposal and rehabilitation of mark, then restoration of construction areas and landscaping.

(Refer Slide Time: 28:27)

The image shows a detailed table of contents for a project plan, organized into two columns. The left column lists chapters 1 through 13, with sub-sections and page numbers. The right column lists chapters 10 through 13, also with sub-sections and page numbers. A URL is visible in the bottom right corner: [http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf). The page number 55 is at the bottom right.

Then you will see the creation of a Greenbelt around the reservoir, you can see rehabilitation and resettlement plan, then they also have a disaster management plan, reservoir, and RIM treatment plan. And then you can see construction, methodology, and equipment planning how they are going to plan that environmental monitoring program, how they are going to monitor that. And all the cost estimates involved there. So, you see how each segment has been dealt with here.

(Refer Slide Time: 29:00)

The image shows a page from a 'Biodiversity Conservation & Wildlife Management Plan'. It includes an introduction section and a table titled 'Table 1.1: Summary table of plants belonging to different groups recorded during the vegetation survey'. The table has columns for 'Plant Group/Life form' and 'No. of species' (Monsoon, Winter, Summer, Post monsoon). A URL is visible in the bottom right corner: [http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf). The page number 56 is at the bottom right.

Plant Group/Life form	No. of species			
	Monsoon	Winter	Summer	Post monsoon
Angiosperms	111	105	110	114
Dicots	69	67	69	92
Monocots	22	19	21	22
Trees	48	48	48	48
Shrubs	22	22	22	22
Herbs	23	18	22	26
Climbers	11	11	11	11
Pteridophytes	5	5	5	5
Bryophytes	4	4	4	4
Algae	16	16	16	16
Fungi	4	4	4	4

Source: Primary data sampling

And now just there are so many components, but I will just quickly run through the Biodiversity Conservation and Wildlife Management Plan. So, you see how they have summarized different types of plans, what different groups they are, the number of species that were recorded during the service, and all those scoping baseline studies and methods that were involved. So, here you can see what they studied and how they have presented the summary table.

(Refer Slide Time: 29:24)

**Table 1.2: Conservation status of the flora species in the Demwe Lower hydroelectric project**

S.No.	Status	Name	Catchment	Influence	Project Area
1	Endangered	<i>Dioscorea deltoidea</i>	1	1	-
2	Endangered	<i>Acer oblongum</i> Var. <i>microcarpum</i>	1	1	-
3	Rare	<i>Begonia burkiki</i> ; <i>Calanthe manii</i> <i>Paphiopedilum wardii</i> ; <i>Phoenix rupicola</i>	4	4	-
<b>Total</b>			<b>6</b>	<b>6</b>	-

Source: Secondary data and data from primary surveys

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

57

And then they are also telling about the conservation status which are the endangered species, which are the rare species so that all is taken care of you have you have learned about these before. So, you see how they are indicating it here.

(Refer Slide Time: 29:42)

**Table 1.3: Conservation status of the faunal species in the Study Area, Influence Zone and Catchment Area of Demwe Lower hydroelectric project**

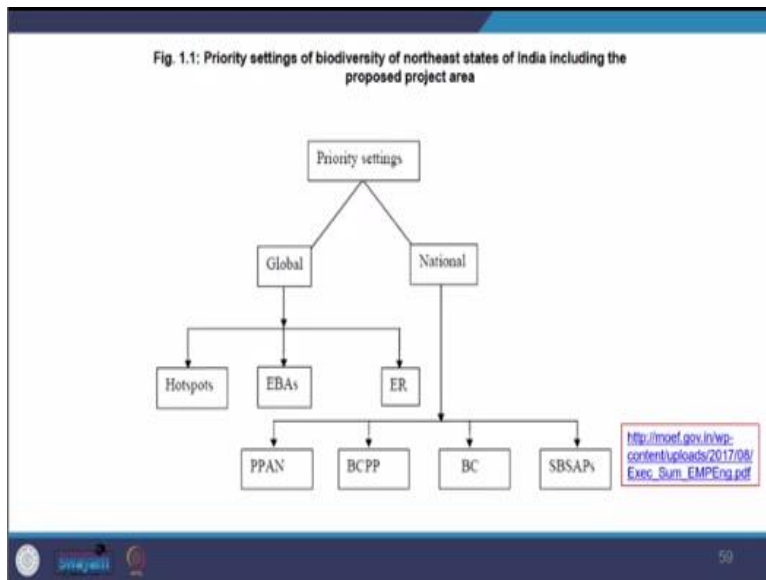

Common name	Scientific name	SA	IZ	CA	IUCN	ZSI	WPA
Hoolock gibbon	<i>Bunopithecus hoolock</i>	A	P	P		EN	I
Slow loris	<i>Nyctoebus coucang</i>	A	P	P		IK	I
Tiger	<i>Panthera tigris tigris</i>	A	-	-	EN	VU	I
Common leopard	<i>Panthera pardus</i>	A	P	P		VU	I
Clouded leopard	<i>Neofelis nebulosa</i>	A	P	P		EN	
Leopard cat	<i>Prionailurus bengalensis</i>	A	P	P		VU	I
Fishing cat	<i>Prionailurus viverrinus</i>	A	P	P		VU	I
Himalayan Black Bear	<i>Ursus thibetanus</i>	A	A	P	VU		I

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

58

Then what is the conservation status of faunal species in the study area, influence area, and the catchment area you can see here? So, they are showing all the common names, scientific names, and all the areas here and which as per which list IUCN and all that is applicable here.

(Refer Slide Time: 30:04)

And then they have also done priority setting of biodiversity, like what is the priority setting as a global, national, hotspots EBA, ER, and then all those categories, which you can see here at the national level.

(Refer Slide Time: 30:20)

**1.3.2 Activities and Development Works to be Undertaken**  
For the promotion of the conservation and preservation of habitats and ecosystem, the following measures are proposed for the Derrive Lower H.E. project.

**1.3.2.1 Establishment of gardens for voucher specimen**  
The entire region has diverse habitats featuring a varied biota. Many threatened, rare and endemic plant species like *Albizia arunachalensis*, *Schizostachyum fuciforme* (Poisonous bamboo), *Acer oblongum* var. *microcarpum*, *Cyrtosperma* spp., *Litsea malabarica*, *Jyzygium malabarica*, etc. are reported to inhabit the region. The proposed repositories would be of special interest to biodiversity conservation, scientific research, education, and environmental awareness. Depending on the habitat of a species, three gardens are proposed at Parasuram Kund, left bank of Tiding river (upstream of Tiding-Loit confluence) and near Ziro point. These repositories would be established in an area of 3-10 ha of degraded land. The break up of the total financial outlay for the repositories including development of nurseries, collection of seeds and plant species, small laboratory and staff for five years is given in Table 1.4.

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEna.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEna.pdf)

**Table 1.4: Cost estimates for establishment of gardens for voucher specimen**

Particulars	Amount (in Rs.)
Salaries/wages* (Research scientist, Curator, Gardener, Peon)	92,00,000
Research Scientist (1) (basic Rs. 20280)	
Curator (2) (basic pay Rs. 11170)	
Gardener (3) (basic pay Rs. 9000)	
Peon (3) (basic pay Rs. 6050)	
Collection of seeds and plant species	2,00,000
Development of gardens (3 No)	20,00,000
Development of nurseries (2 No)	4,00,000
Plantation	5,00,000
Water supply system	2,00,000
Laboratory	

**1.3.2.2 Butterfly park**  
Loit valley is highly rich in the diversity of butterflies. Parasuramkund, Tiding, Salangam, Mompani are well endowed habitats for the butterflies. During the primary surveys many scheduled butterfly species like Variegated Sailor, Metallic cerulean, Dullied sailer, Elbowed planlet, etc. were encountered. Also, a large soul of Indian cabbage white was observed along the banks of Loit and Tiding rivers. Field investigations also revealed that a number of herbaceous flowering plants in the Parasuramkund, Mompani and areas along the riparian habitats attracted a variety of butterflies. In order to conserve these butterflies, 3 parks are suggested on the degraded lands (near Wairo, Tiding and Salangam). The area of each park would be around 1.5 – 2.0 ha. The flowering and fruit bearing plant species like Hibiscus spp., Tagetes spp., Cestrum spp., Artemisia spp., Murraya spp., Crotalaria spp., Desmodium spp., Cissampelos, Phlogothanthus spp., Duabanga spp., Bombax ceiba, Bauhinia spp., etc. are suggested for the proposed butterfly parks. Moist damp places and stream beds are the most appropriate places for the butterflies. Therefore, these parks will be located along the river beds. Total budget including fencing of enclosed areas, plantation, salaries, maintenance grant and contingency for butterfly parks is given in Table 1.5 amounting to Rs. 96,80,000 (Rs. Ninety six lakhs and eighty thousand).

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEna.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEna.pdf)

**Table 1.5: Cost estimates for establishment of butterfly gardens**

Salaries/wages (1 curator, 3 gardeners/peon)	Rs. 23,90,000
Fencing in closed areas	Rs. 30,00,000
Plantation	Rs. 8,00,000
Maintenance grant (3) (Rs. 2,00,000 per year/park)	Rs. 30,00,000
Contingency (include travel etc.)	Rs. 5,00,000

So, you also see what kind of activities and development work will be undertaken within this and then like they are taking care of within that activity establishment of gardens for voucher specimen, then they have calculated the cost estimate for that, then they are working out the Butterfly Park and then they have worked out the cost for that, how they are going to do it.

(Refer Slide Time: 30:46)

**1.3.2.3 Preparation of Peoples Biodiversity Registers (PBR)**

There is increasing realization that a vast amount of traditional knowledge on the plant species and their importance exists in the remote areas, villages and tribal areas of India. This knowledge remains both unexploited and underestimated. The Mishmi tribes of the region have a unique way of life and have developed their own system of medicine and food. Tribes use many plant species, viz. *Diplazium esculentum*, *Solanum torvum*, *S. spirale*, *S. indicum*, *paedana foetida*, *clerodendrum colebrookianum*, *Impatiens* spp., *Splianthus* sp. etc. for food and medicines to cure some of the prevalent diseases. Recording and exchange of this unique system of knowledge of economic and medicinal importance of the plant species would open doors for a new strategy of conservation. In addition to the documentation of the traditional knowledge on medicinal plants, cultivars, folk varieties, the proposed PBR would also prepare a list of para taxonomists, and local 'vaids' and record their knowledge. For this purpose, it is proposed that two teams of researchers, each headed by a scientist should be engaged on contractual basis through tie-up with nearby university/research institution of repute having requisite expertise in the subject area. The activities spread over 5 years could be strengthened with a financial outlay of Rs. 50,00,000 (Rs. Fifty lakhs).

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

62

**1.3.2.5 Identification of invasive species and recovery of susceptible species**

The proposed project area is not under severe anthropogenic pressure. However, *Ageratina adenophora*, *Ageratum conyzoides*, *Bidens bipinnata*, *Mikania micrantha*, *Chromolaena odorata* and *Ambrosia artemisiifolia* are some of the invasive species that have been introduced unintentionally or by natural means in this area. The increased human activity and disturbance in natural ecosystems is the main cause of the spread of invasive species. This trend may prove to be adverse for the native plant diversity leading to decline in number of endemics in future. In order to understand this problem and manage it successfully the following measures are suggested:

- Identify the areas where biological invasions have occurred and are threatening.
- Identify the exotic invasive species that are invading these habitats.
- Identify the institutions/experts who can undertake inventory and researches to suggest management measures to control the negative impact of invasive species.
- Inventory the native species which are threatened by invasions and that require rehabilitation and management.
- Researches on control of weed including bio control measures and forest biology.
- Removal of exotic invasive plant species and obnoxious weeds.

Total budget for these activities is suggested to be Rs. 50,00,000 (Rs. Fifty lakhs).

Environmental Management Plan - Biodiversity Management Plan 1-13

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

63

Then they prepare preparation People's Biodiversity Register so that they can take taking as a mitigation measure and then identification of invasive species and recover susceptible species. So, you have also studied invasive species and susceptible species. So, they are creating that identification.

(Refer Slide Time: 31:05)

### 1.3.2.6 Forest Protection Plan

As stated earlier, the surroundings of the proposed project (Tengapari – Madhuban – Wairo and Demva - Sevapass – Tiding) represent a habitat heterogeneity which has conservation significance. The area does not have the minimum basic amenities such as road and communication network. The wildlife protection force is not adequately equipped with watching towers, wildlife personnel and other field work facilities. In addition to the efforts of various government and non-government organizations, a number of strengthening measures for these conservation sites are suggested. Various activities which are warranted for the biodiversity conservation and management of conservation sites are described in the following paragraphs:

Environmental Management Plan - Biodiversity Management Plan

1-14

Table 1.6: Cost estimates for Forest Protection Plan

Particulars	Amount (in Rs)
Salaries/wages/Contingency (for 5 years)	
(10 forest guards, 1 forestier)	90,00,000
Equipment (Camera, Wireless, Laptop, V-Sat, GPS etc)	30,00,000
Reward programmes	10,00,000
Fire lines	30,00,000
Check posts and watch towers	10,00,000
Construction of bridges and patrolling paths	15,00,000
Office Complex	15,00,000
Vehicles	8,00,000
Mobile rescue van	8,00,000
Veterinary facilities	10,00,000
<b>Total</b>	<b>217,00,000</b>

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

64

### 1.3.2.7 Safeguards during construction phase

During the construction phase, various adverse impacts on the wildlife are anticipated in the surrounding areas of the proposed project in terms of increased noise levels, land vibrations during tunneling and blasting, release of air and water pollutants, etc. Mammals are the most vulnerable group affected by these negative impacts, which affect their movement, behaviour and breeding habit. To avoid and minimize the negative impacts from these activities project authorities are advised to prepare strict guidelines as follows:

- (i) Strict restrictions shall be imposed on the workers at project sites to ensure that they do not harvest any species/produce from the natural forests and cause any danger or harm to the animals and birds in the wild.
- (ii) Minimum levels of noise during construction activities will be maintained and no activity shall be carried out at night where the project site is in the close vicinity of animal/bird or human habitats especially located in the vicinity of dense forest area.

Environmental Management Plan - Biodiversity Management Plan

1-16

### 1.3.2.8 Research and Development activities

Efforts have been made to document the status, distribution pattern, habitat requirements and conservation strategy for the floral as well as for the faunal species falling under the RET schedule. Appropriate budgetary provisions have been made for promoting conservation of these species. However, it is recognized that for some of the species, propagation protocols and conservation strategy are not fully documented. It is therefore proposed to earmark a lumpsum provision of Rs 50 lakhs for supporting R & D activities by identified national, international research organizations.

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

65

## 1.4 WILDLIFE MANAGEMENT PLAN

The influence zone and catchment of proposed project is very important ecological niche for the wildlife. A part of the Kamlang Wildlife sanctuary forms the catchment of the Demva Lower H.E. project. It harbours about 58 species of

Environmental Management Plan - Biodiversity Management Plan

1-18

DEMVA LOWER HE PROJECT (170 MW)

10/11/2016

- xiv. Patrolling and surveillance
- xv. Identification of decimating factors
- xvi. Anti-poaching and hunting operational measures
- xvii. Study of wildlife population during the project implementation
- xviii. Enhancing bird diversity and dynamics
- xix. Eco-development and community participation
- xx. Awareness, education and sensitizing of fringe population
- xxi. Recruitment of field staff

### 1.4.1 Cost Estimates

Table 1.7 shows the statement of physical and financial target for Wildlife Management.

Table 1.7: Cost estimates for Wildlife Management Plan for Demva Lower H.E. project

S.No	Activities	Unit	Rate (in Rs.)	Quantity	Cost (in lakhs)
1	Habitat improvement	ha	1,000	60	6.00
2	Construction of watchtowers	No	2,50,000	3	7.50
3	Construction of Check posts	No	3,50,000	2	7.00
4	Improvement of footpath	km	3,50,000	4	14.00
5	Watchtowers/check dams	each	1,000	300	3.00
6	Estimation of wildlife	ha	22,500	20	4.50

Environmental Management Plan - Biodiversity Management Plan

1-20

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

66

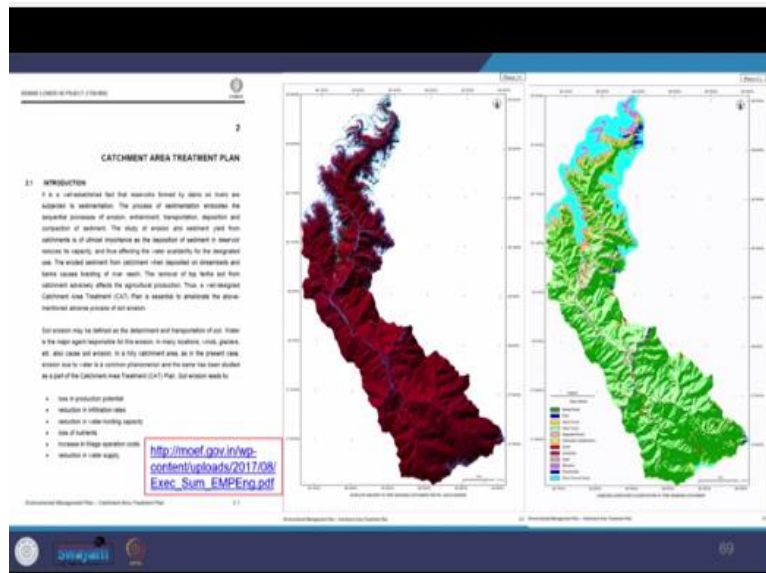

And then, the Forest Protection Plan and what kind of cost will be involved. So, for each and everything, they are identifying it safeguard during the construction phase. So, now you can see the phase also they are doing and what kind of research and development activities they will undertake. Then they look at the Wildlife Management Plan again, you can see that all the activities have not been put them here patrolling

and surveillance, identification of decimating factors anti-poaching hunting study of wildlife population, and so on. And then the cost involved in that.

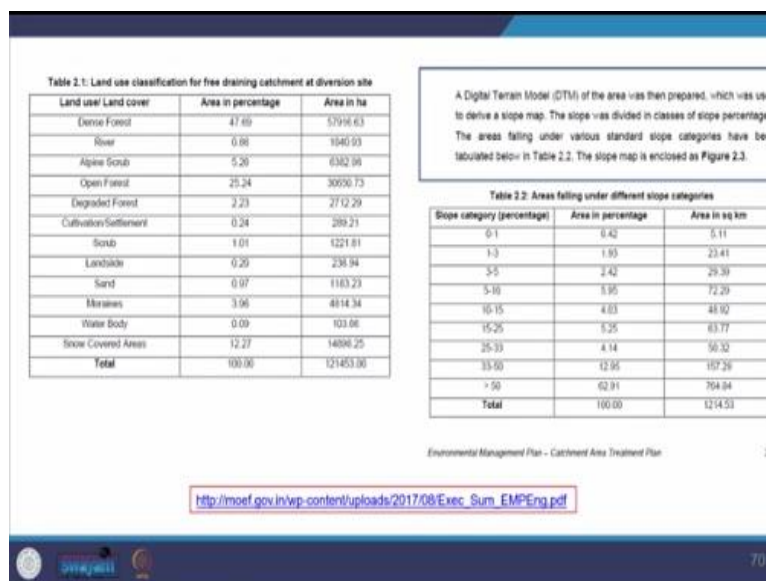

(Refer Slide Time: 32:20)

So, likewise, you can see the Catchment Area Treatment Plan, just skimming through this a lot of areas which they have gone through, but we can just quickly skim through this, not all of it, so we can see the Catchment Area Treatment Plan here, various land use and land cover.

(Refer Slide Time: 32:39)

**Table 2.7: Erosion intensity rates of catchment area**

Erosion intensity categorization as per SYI values	Percentage of catchment area
Very High	4.72
High	13.65
Medium	17.59
Low	28.79
Very Low	35.25
<b>Total</b>	<b>100.00</b>

**Table 2.8: Sub-watershed wise proposed treatment measures**

Sub-watersheds	Afforestation (1600 tree/ha) in ha	Afforestation (800 tree/ha) in ha	Contour-Bunding in ha	Pasture Development in ha
W2	420	65	22	158
W7	323	49	26	54
W8	754	344	56	96
W22	1001	643	0	381
W24	900	1284	3	328
	<b>3383</b>	<b>2384</b>	<b>86</b>	<b>1017</b>

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

The classification you can see here like dense forest, river, Alpine scrub, and so on, you can see. Then land use classification for fields, draining catchments, then areas falling under different slope categories, what digital terrain model they have developed. Then erosion intensity rates of the catchment area they have taken to see how they are classifying it to understand the significance of very high, high, medium, low, and very low total, you can see how sub-watershed wise also, they are proposing the treatment measurements.

So, you can see the watershed numbers here what kind of treatment they are doing afforestation like they are going to do 1600 trees per hectare or they going to do 800 trees per hectare or they are going to do the contour bunding and what area and then pasture development and how much area they would be doing. So, see the kind of treatment measures they are taking. So, you can see the range of mitigation measures also which are here.

(Refer Slide Time: 33:47)

2.6 COST ESTIMATE

The cost required for Catchment Area Treatment is Rs. 3312.86 lakh. The details are given in Table 2.6.

Table 2.6: Cost estimate for Catchment Area Treatment of Lower Denosa NBP

Sl. No.	Item	Rate (Rs.)	Unit	Total	
				Physical	Financial (Rs. Lakh)
<b>Biological Measures</b>					
1	Afforestation (1000 trees/ha)	20,000/ha	ha	2000	1219.27
2	Afforestation (200 trees/ha)	10,000/ha	ha	2200	494.00
3	Maintenance of afforestation area	6,000/ha	ha	3707	222.38
4	Pasture development	20,000/ha	ha	1017	203.47
5	Barbed development	2,00,000/m	m	60	120.00
6	Maintenance of nurseries	1,00,000/ha	ha	80	80.00
7	Vegetative lining	40,000/m	m	90	22.80
8	Stash and care for 5 years @ 10 persons	6,000/m <sup>2</sup> month	m <sup>2</sup> month	3000	180.00
<b>Engineering Measures</b>					
9	Contour Bunding	20,000/ha	ha	90	27.00
10	Check Dam	2,00,000	No	100	200.00
	<b>Total</b>				<b>3312.86</b>

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

Silt Yield Index

[http://moef.gov.in/wp-content/uploads/2017/08/Exec\\_Sum\\_EMPEng.pdf](http://moef.gov.in/wp-content/uploads/2017/08/Exec_Sum_EMPEng.pdf)

You can see the cost estimation of a catchment area treatment here you can see how they have calculated the problem with the silt yield index. Then you can see all the proposed treatment measures, you can see a forestation the green color shows all the afforestation. Red shows afforestation for how much area like 1600, 800 and then the contour bunding where they will do where they were going to develop pasture development, and then how they are going to create sub-watersheds. So, you can see all those here.

(Refer Slide Time: 34:25)

Environmental Management Plan - Catchment Area Treatment Plan 2/27

And then they created a treatment index map here based on their findings. So, you see how intensive and detailed they prepare. And then now you can see your year wise target; physical and financial for the catchment area here. So, you can see your 1 year, 2 years, 3, 4, 5 and then how much total financial and then for the biological measure, for engineering measure and so on. So, that they have covered. So, that was what we saw in the Environmental Management Plan.

(Refer Slide Time: 34:55)

**Summary**

- 1 Definitions and Concepts
- 2 Key legislation, policy and guidance
  - Policies and standards: International Financial Institutions (IFIs), Guidance
- 3 Outline methodology and ESMP structure
- 4 Challenges
- 5 Example of EMP for Demwe Lower HE Project, Arunachal Pradesh

So, winding up for today's class. As we saw in both definitions and concepts about Environmental Management Plans, we also saw environmental and social management plans ESMPs. So, then we saw the key legislation policy and guidelines across the globe as well as what is in our country. Then we saw the involved metallurgy and what is the structure of it, what kind of challenges are still there, and then we looked at one of the examples just to understand what the EMP looks like.

## Suggested Watch and Read

Box 20.1 Ewinzi Small Hydro Power Project, Kaseso, Uganda (Eco Power Holdings Ltd, 2013)

The Ewinzi Small Hydro Power Project is a proposal for 6.6 MW of installed generating capacity to be built and operated by Eco Power Holdings Ltd. By harnessing the hydro power potential of the Ewinzi river in Uganda, the proposal will generate an annual energy output of 24.8 GWh.

An EIMP has been developed which flows from the EIA, the Environmental Action Plan, and other statutory permits and licenses issued by the Ugandan authorities. Guided by the IFC Performance Standards, the EIMP aims to ensure the adoption of a strategic approach to mitigate the environmental, health and safety aspects of the project according to accepted guidelines and best practice. The EIMP is 120+ page-long document to be used during the full project life cycle to serve as a 'study reference' for the developer and key stakeholders (mainly contractors, sub-contractors, external consultants and other statutory agencies). Major responsibility for implementing the EIMP lies with the developer and the civil

contractors (during the construction phase). The EIMP is structured in four parts:

- Part 1: Introduction to the project, impacts, the organisational structure for the management of the EIMP plus a detailed description of the roles and responsibilities of respective parties.
- Part 2: Provides details of the Environmental and Social Impact Mitigation Action Plans.
- Part 3: Explains requirements for compliance monitoring and reporting, provides guidelines and format to be used to report on mitigation actions as required by various lead agencies.
- Part 4: Supplemental management plans to meet additional requirements of the IFC PSs, including:
  - a) Public Consultation and Disclosure Strategy Plan (PS1)
  - b) Employment Policy (PS2)
  - c) Explosive Handling and Blasting Procedures (PS2)
  - d) Slope Protection and Soil Conservation and Erosion Control Plan (PS3)
  - e) Construction Waste/Spoils Disposal Management Plan (PS3)
  - f) Hazardous Materials Management Plan (PS3)
  - g) Occupational Health and Safety Management Plan (PS4)
  - h) Community (Public) Safety Management Plan (PS4)
  - i) Traffic Management Plan (PS4)
  - j) Chance Find Procedure (identification of unsuspected graves or sites of heritage significance) (PS3)

So, that was all for today. So, this was our key reference, we have been referring to the book of Therivel and Wood and then we have also taken certain cases here for reference purposes and then you can see the suggested watch and read. They can be, there are more examples which you can refer to and have a better understanding of the issues here.
